Portfolio

Education

Indian Institute of Information Technology Ranchi *2027*

B.Tech in Electronics and Communication Engineering (with spec. in ES and IOT) CGPA : 8.06

Technical Skills

Languages: C/C++, JavaScript, TypeScript, Python, Java, SQL, HTML/CSS
Developer Tools:Linux, Git/GitHub, Vercel, Render, Arduino
Frameworks:React.js, Node.js, Express.js, Prisma, Supabase, Redux Toolkit, Tailwind CSS
Cloud/Databases:MongoDB (NoSQL), MySQL (SQL), PostgreSQL (via Supabase/Prisma)
Coursework: Data Structures Algorithms, Operating Systems, Object-Oriented Programming, Embedded Systems / Microcontrollers

Personal Projects

Nectar *March 2026*

Tools: TypeScript, PostgreSQL (via Prisma), Supabase, React, RTK, Gemini API

- Engineered a type-safe, relational backend architecture utilizing **PostgreSQL** and **Prisma** to securely manage complex user biometrics and strict dietary constraints.
- Integrated the **Gemini API** to dynamically generate highly personalized, macro-accurate 5-meal daily plans, processing physical attributes against targeted physiological goals.
- Implemented robust global state management via **Redux Toolkit (RTK)** to orchestrate complex client-side data flows, ensuring seamless synchronization of user biometrics, macro tracking metrics, and dynamic UI states.

GameVault *Jan 2026*

Tools: React.js, MongoDB, Mongoose, JWT, Bcrypt, Framer Motion

- Engineered a custom hardware benchmarking algorithm that cross-references user-defined system specifications against queried RAWG API data to dynamically validate minimum and recommended hardware compatibility.
- Architected a scalable user-library database schema utilizing MongoDB and Mongoose, allowing users to persistently categorize complex game collections across discrete tracking states (Played, On-Hold, Dropped, Want to Play).
- Integrated the RESTful RAWG API to dynamically populate the application with expansive video game metadata, handling asynchronous data fetching and client-side rendering with React.js.
- Implemented secure user authentication and authorization pipelines utilizing JWT for session integrity and bcrypt for cryptographic password hashing to protect personal user libraries.
- Developed a highly responsive user interface featuring Framer Motion physics, a global search utility, and a personalized rating engine that dynamically maps UI state changes to user sentiment scores.

Multi-Theme Developer Portfolio *March 2026*

Tools: TypeScript, React, Framer Motion, Vite, Tailwind CSS

- Architected a fully responsive, decoupled CSS state-management engine to instantly hot-swap global UI themes (Minimalism, Cyberpunk, Nord, Brutalism) across typography, colors, and layout geometry.
- Engineered highly interactive components utilizing **Framer Motion**, featuring a fluid "Project Shelf" accordion and a custom "Glyph Grid" with real-time trailing cursor physics and randomized data generation.
- Built a unified "System Telemetry" dashboard by seamlessly integrating external npm modules to visualize live GitHub commit history alongside resume access and social links.

Achievements

CodeChef3 Star Rating (Max Rating: 1727) *May 2024*

- Achieved a peak global rating of 1727, demonstrating advanced proficiency in data structures and algorithmic problem-solving.

CodeforcesPupil (Max Rating: 1355) *May 2025*

- Attained the Pupil rank by consistently participating in competitive programming contests and solving complex logic constraints under time pressure.
