Education

Indian Institute of Information Technology Ranchi *2027*

B.Tech in Electronics and Communication Engineering (with spec. in ES and IOT) CGPA : 8.06

Technical Skills

Languages: C/C++, JavaScript, TypeScript, Python, Java, SQL, HTML/CSS
Developer Tools:Linux, Git/GitHub, Vercel, Render, Arduino
Frameworks:React.js, Node.js, Express.js, Prisma, Supabase, Redux Toolkit, Tailwind CSS
Cloud/Databases:MongoDB (NoSQL), MySQL (SQL), PostgreSQL (via Supabase/Prisma)
Coursework: Data Structures Algorithms, Operating Systems, Object-Oriented Programming, Embedded Systems / Microcontrollers

Personal Projects

Nectar *March 2026*

Tools: TypeScript, PostgreSQL(via prisma), React, JWT, Bcrypt

- Developed an **AI-driven** nutrition platform using **Gemini API** that generates personalized 5-meal daily plans by processing user biometrics (height, weight, age) and dietary constraints, ensuring strict adherence to specific allergies and preferences.
- **Engineered goal-oriented logic** for Cutting, Bulking, and Body Recomposition, providing granular macro-breakdowns (Calories, Protein, Carbs, Fats) for individual meals and daily cumulative totals.
- Developed a clean, scalable codebase using **TypeScript** ensuring high maintainability and ease of feature expansion for future nutrition modules or AI integrations.
- Implemented robust state management using **Redux Toolkit (RTK)** to handle complex data flows and cache AI-generated meal plans, integrated with **Prisma and Supabase** for a type-safe, persistent data layer.

GameVault *Jan 2026*

Tools: MongoDB, Express.js, React.js, Node.js, JWT, Bcrypt

- Developed a full-stack web application designed for discovering and cataloging video games utilizing the **MERN stack.**
- Engineered robust RESTful APIs with Node.js and Express to manage user profiles and game data within a MongoDB database.
- Implemented secure user authentication and authorization workflows using **JWT and bcrypt** for encrypted password storage
- Built a responsive and interactive user interface with React.js, optimizing component reusability and state management.

Fast-React-Pizza *Feb 2026*

Tools: React.js, Node.js, Express.js, Redux Toolkit, Tailwind CSS, Vite

- Developed a full-stack pizza ordering application, integrating a responsive **React** frontend with a robust **Node.js** and **Express.js** backend server
- Engineered custom RESTful API endpoints to handle dynamic menu retrieval, order creation, and status tracking, ensuring seamless data flow between client and server.
- Implemented robust global state management utilizing **Redux Toolkit** to persistently synchronize local shopping cart operations with server-side data
- Designed a fully responsive and utility-first user interface implemented entirely with **Tailwind CSS.**

Achievements

CodeChef3 Star Rating (Max Rating: 1727) *May 2024*

- Achieved a peak global rating of 1727, demonstrating advanced proficiency in data structures and algorithmic problem-solving.

CodeforcesPupil (Max Rating: 1355) *May 2025*

- Attained the Pupil rank by consistently participating in competitive programming contests and solving complex logic constraints under time pressure.
