Education

Indian Institute of Information Technology Ranchi *2027*

B.Tech in Electronics and Communication Engineering (Specialization in ES and IoT) CGPA: 8.06 / 10.0

Technical Skills

Languages: C/C++, JavaScript, TypeScript, Python, Java, SQL, HTML/CSS
Developer Tools: Linux, Git/GitHub, Vercel, Render, Arduino
Frameworks: React.js, Node.js, Express.js, Prisma, Supabase, Redux Toolkit, Tailwind CSS
Cloud/Databases: MongoDB (NoSQL), MySQL (SQL), PostgreSQL (via Supabase/Prisma)
Coursework: Data Structures & Algorithms, Operating Systems, Object-Oriented Programming, Embedded Systems / Microcontrollers

Personal Projects

Nectar *March 2026*

Tools: TypeScript, PostgreSQL (via Prisma), Supabase, React, RTK, Gemini API

- Developed a **type-safe, relational backend architecture** utilizing **PostgreSQL** and **Prisma** to securely manage complex user biometrics and strict dietary constraints.
- Leveraged the **Gemini API** to dynamically generate highly personalized, **macro-accurate 5-meal daily plans**, processing physical attributes against targeted physiological goals.
- Orchestrated robust global state management via **Redux Toolkit (RTK)** to manage complex client-side data flows, ensuring seamless synchronization of user biometrics, macro tracking metrics, and dynamic UI states.

GameVault *Jan 2026*

Tools: React.js, MongoDB, Mongoose, JWT, Bcrypt, Framer Motion, RAWG API

- Formulated a custom **hardware benchmarking algorithm** that cross-references user-defined system specifications against queried **RAWG API** data to dynamically validate minimum and recommended hardware compatibility.
- Designed a **scalable user-library database schema** utilizing **MongoDB** and **Mongoose**, allowing users to persistently categorize complex game collections across discrete tracking states (Played, On-Hold, Dropped, Want to Play).
- Incorporated the **RESTful RAWG API** to dynamically populate the application with expansive video game metadata, handling asynchronous data fetching and client-side rendering with **React.js**.
- Established **secure user authentication** and authorization pipelines utilizing **JWT** for session integrity and **bcrypt** for cryptographic password hashing to protect personal user libraries.
- Built a highly responsive user interface featuring **Framer Motion physics**, a global search utility, and a personalized rating engine that dynamically maps UI state changes to user sentiment scores.

Multi-Theme Developer Portfolio *March 2026*

Tools: TypeScript, React, Framer Motion, Vite, Tailwind CSS

- Constructed a fully responsive, **decoupled CSS state-management engine** to dynamically switch global UI themes (Minimalism, Cyberpunk, Nord, Brutalism) across typography, colors, and layout geometry.
- Crafted highly interactive components utilizing **Framer Motion**, featuring a fluid **Project Shelf** accordion and a custom **Glyph Grid** with **real-time trailing cursor physics** and randomized data generation.
- Deployed a unified **System Telemetry** dashboard by seamlessly integrating external npm modules to visualize live GitHub commit history alongside resume access and social links.

Achievements

CodeChef 3 Star Rating (Max Rating: 1727) *May 2024*

- Achieved a **peak global rating of 1727**, demonstrating advanced proficiency in **data structures and algorithmic problem-solving**.

Codeforces Pupil (Max Rating: 1355) *May 2025*

- Attained the **Pupil rank** by consistently participating in competitive programming contests and solving **complex logic constraints** under time pressure.
